

News from HR

Staffing changes

Katy Najafi is acting in the position Manager, Open Access over the next couple of months. Katy has great expertise with the repository and DSpace and has dealt with almost every aspect of the position in the past.

Digitisation project officers. Following a recruitment process Erin Gallant and Stephanie Dangerfield have been appointed to be Digitisation project officer starting in late August and ending in late January helping us to move to the next stage in digitisation.

Policies and guidelines etc

Fines

Thanks to the Circ Group, Mark Huppert and the many who have assisted implementing the new fines legislation Thanks to Anne for her work leading the group and finalising the guidance for staff and supervisors.

Summon/Supersearch. Mark is thrilled with new functionality that will go live on 28 July. From then we can start using an enhanced version of the "Full Text E-Journals" list. He notes that it plugs a gap in Summon functionality: the ability to select an individual journal and search inside that one title. It may also be possible to browse issues of a journal by using the advanced Summon date range search, but we'll have to try that out :

III. III are establishing an Australasian support office with new staff and an office space set up in Melbourne in Northbank. A photo of the expanded local team plus VP Leif Pedersen is [online](#):

Deconstructing the Durham statement...

Sarah Reis has self-archived "Deconstructing the Durham Statement: The Persistence of Print Prestige During the Age of Open Access." She has undertaken a very detailed analysis and reached some deep conclusions – for example "This paper argues that the only way a widespread shift from print publication to electronic-only publication will occur is if the flagship law reviews at the three most elite law schools—Harvard, Yale, and Stanford—initiate reform by being the first to make this transition". The drafters of the Durham Statement included law library directors from nearly all of the top 14 law schools at that time. In February 2009, the Durham Statement was posted on the website for the Berkman Center for Internet & Society at Harvard University. The Durham Statement has 75 signatories, representing various law schools across the country. It calls for "[e]very U.S. law school to commit to ending print publication of its journals and to making definitive versions of journals and other scholarship produced at the school immediately available upon publication in stable, open, digital formats, rather than in print."

The Rise of the New University Press: the current landscape and future direction.

A very thoughtful paper delivered at LIBER this year. "In 2016, Jisc and the Northern Collaboration, a group of 25 higher education libraries in the north of England embarked on a research study to identify, evaluate and benchmark NUPs and library-led initiatives. Informed by a desk top review of current library publishing ventures in the US, Europe and Australia, the study will provide an overview of Universities' existing and future plans and directions regarding NUPs or library publishing ventures in the UK."

What Motivates Authors of Scholarly Articles?

Tenopir et al report on a survey was sent to approximately 15,000 faculty, graduate students, and postdoctoral researchers at four large North American research universities – findings "journal's reputation and fit with the author's work are the two most highly-rated attributes that respondents take into consideration" and "Respondents from across all position types and subject disciplines express that it is of the highest importance for researchers at other research-intensive institutions to have access to their research output."

Libraries and the curse of knowledge.

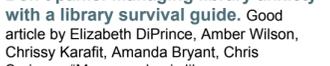

Lorcan Dempsey writes: "Libraries are now very aware of how they need to move beyond jargon in describing their services—in signage, in informational materials, or in user interfaces. The goal is to be clearly understood by those who do not already understand library structures or specialist terminology. To be clearly understood, one cannot presume that potential users already understand how the library works, or is structured, or what jargon is used to describe services. One example here is discovery." ..:

Browser the Texas library cat's job is saved.

A light read "Why the city council of White Settlement, Texas, decided to fire Browser (right), cat mascot of the city public library, is not clear, but the vote two weeks ago was 2–1 to banish Browser. On July 1, under an avalanche of complaints, the council members decided unanimously that Browser could stay. Browser's supporters began a petition drive, and of course the internet got involved, and more than 1,000 messages from around the world later, the council voted again unambiguously to keep Browser."

Don't panic! Managing library anxiety with a library survival guide.

Good article by Elizabeth DiPrince, Amber Wilson, Chrissy Karafit, Amanda Bryant, Chris Springer. "Many academic library users, particularly incoming college freshmen, are unsure about what the library offers, how it is useful, where they can receive assistance. A library guide or handbook, if designed to appear interesting and relevant to students, can address these issues. This article examines the creation, distribution, and assessment of a library survival guide given to incoming college freshmen. The goal of the guide was to decrease library anxiety and familiarize new students with library resources and services. Results and revisions of future editions of the guide are also discussed".

ANU Open Research

Impact of Social Sciences – Essential Guide: Nine ways research gets into Parliament.

Discussions about research and policy have a tendency to be more reflective about policy-making in general, rather than focusing on the more practical aspects of how research filters through a variety of networks and into policy discussions. Sarah Foxen looks at eight specific ways research currently gets into Parliament and provides some helpful links on where to start to get more involved.

Australian National Data Service

What is... Research Data Australia?

Ever wondered what it is Research Data Australia is and how you can use it to support your research?

Research Data Australia is an online service managed by ANDS that helps you find, access and reuse data from Australian research organisations, government agencies and cultural institutions.

It contains descriptions of (and links to) thousands of datasets about anything from [cancer](#) to [ancient languages](#) to [locations of public barbecues](#). If you are a data owner, you can also use it to make your data more discoverable.

To find out how to make the most of Research Data Australia, see the information pages on ANDS' website and then [try it out](#) yourself.
